

For this delivery we are delivering the same campaign for two separate sub-brands. We already have a landing page that is 90% where we need it to be in terms of the design, minus some slight changes to a couple of areas.

I estimate that this shouldn't take more than one week to complete all of the below, as I'll be providing the code for the base template when the work starts. But please do provide your estimate for this, as you are the ones who will be doing the work after all.

As with previous deliveries, I'm supplying you with the Mobile and desktop designs.

Example of current campaign (please do not send form submissions to this page)

- <https://bondeliapark.marketer.tech/>

Figma

- Yippi - Ads can be found on the Google page in the sidebar
<https://www.figma.com/file/AUDYoT8OQcRBnqrzImLuE4/Yippi-H%C3%B8iseth?node-id=0%3A1>
- Blomkvartaket - everything is on the same page for this file
<https://www.figma.com/file/Jqu6BYHt5ElyKlo6FvDAkE/Blomkvartalet-Templates?node-id=0%3A1&viewport=-496%2C643%2C0.125>

Github Repos:

- https://github.com/marketertechnologies/template_yippi_1
- https://github.com/marketertechnologies/template_bломkvartalet_1

Delivery success criteria

- 2x landing page (1 for each brand)
- 10x GMP ads (5 for each brand)
 - 300x600
 - 320x250
 - 580x400
 - 980x300
 - 980x600

Notes:

- Please ensure the websites work on tablet screens also, similar to our previous projects together. Though this should not require a complete rewrite of the provided code.
- While the majority of the websites have been done already with the old code, please make sure that the entire website is looking good after you're finished with the work.
- The amount of agents at the bottom of the pages can vary depending on user input, please make sure to account for this. But limit it to three columns of agents max but as many rows possible.
- The structure of the index.json file will not need to be modified, the values of the existing structure may be modified to suit testing / representation needs.
- Main things that need to change are colours/fonts.

- Ads are the same as before, all images need to be converted to base64, all fonts must either be on google fonts or converted to base64 with no external assets apart from google platforms.
- For the gallery section - you'll want to replace the static mosaic gallery with the gallery included in the components file of the main project, it already has the correct animation/styling effects we use across other projects.
- outline which areas are static/dynamic on designs:

Static:

- Logos
- images (not in the gallery, such as the pictures of clouds etc)
- page title
- contact form title
- unit list title

Dynamic (client fed):

- all text aside from unit list/contact form title
- unit list data
- gallery images
- sales args
- area description/ text accompanying the gallery
- page intro
- map location
